

TicTacBoom

User Documentation

- **TicTacBoom** is a software product made by **Shreshth and Shashank, B.Tech CSE UnderGrads** and is our version of the old school **TicTacToe Game**.
- **TicTacToe** is basically a game in which two players alternately put Xs and Os in compartments of a figure formed by two vertical lines crossing two horizontal lines (**known as grid**) and each tries to get a row of three Xs or three Os before the opponent does. Diagonal rows are valid too.
- **TicTacBoom** is a two player software application which starts when one player taps on any square of the TicTacToe grid to place an X, while another other player taps on any other square of his or her choosing to place an O alternately and then they compete to win.
- The application contains a **status bar**, in the bottom of the interface that displays all of the instructions, including which player's turn it is currently and who ultimately won the game or the match was a draw.
- The game finishes when any player wins or the match draws.
- Any player can restart a game after finishing it by tapping any square in the grid; an X will be placed there automatically.
- The game is initiated by the person who wants to use the **letter X as his/her TicTacBoom weapon**.
- With the aid of our application, which significantly simplifies the user interface, **TicTacBoom** gives you the ability to play tic tac toe in the comfort of your own, without the necessity of a pen and paper.
- **The application can only be run on Android devices and ecosystems.**
- The application can be used on any Android smartphone running at least Android Nougat version 7.1.1 since the **minimum SDK need is API 25: Android 7.1.1**.
- We wish to deploy the game to PlayStore but since it isn't deployed yet, you can install the [apk](#) file of the application from the given link
- Before installing our application, turn on the setting to install apps from unknown sources if you trust us since we are not known to your device but are known to you :)
- We can never think of breaking the trust of our users, in case of any query/ discrepancies, feel free to contact any of us .
